AIM

To analyze and document the tasks performed by users in a Smart Service and Repair Queue Aggregator mobile application and to design corresponding user flow diagrams and wireframes using Lucidchart.

PROCEDURE

Step 1: Assigning Tasks

The major tasks identified in the Smart Service and Repair Queue Aggregator application are:

1. Searching or Browsing Nearby Service Centers
2. Viewing Service Center Details and Queue Status
3. Booking a Service Appointment Slot
4. Payment and Booking Confirmation
5. Providing Feedback After Service Completion.

Step 2: Document User Flows

1. Browsing Nearby Service Centers

1. Home Screen:
User opens the application and lands on the dashboard displaying service categories.
2. Service Categories:
User selects a category such as mobile repair, laptop service, salon, clinic, or vehicle servicing.
3. Location Access:
Application requests location permission to identify nearby service centers.
4. Service Center List:
User views nearby centers along with ratings, waiting time, and distance.
5. Service Center Details:
User selects a specific center to view detailed information.

Flow:

Home Screen → Service Categories → Location Permission → Service Center List → Service Center Details

2. Searching for a Specific Service Center

1. Search Option:
User taps on the search icon or search bar.
2. Enter Query:
User enters service type or service center name.
3. Search Results:
Matching service centers are displayed.
4. Select Center:
User selects a center to view queue details and services offered.

Flow:

Search → Enter Query → Search Results → Service Center Details

3. Booking a Service Appointment Slot

1. View Details:
User reviews queue status and estimated waiting time.
2. Check Availability:
System checks slot availability.
3. Booking Option:
User selects preferred time slot.
4. Confirm Booking:
User confirms appointment.

Flow:

Smart Service Queue App Flowchart

Service Center Details → Check Queue Availability → Select Slot → Confirm Booking

4. Payment and Booking Confirmation

1. Payment Selection:
User selects online payment or pay at center.
2. Enter Payment Details:
User enters payment credentials if online payment is chosen.
3. Booking Confirmation:
System confirms booking and generates appointment details.
4. Notification:
User receives reminder notification before appointment.

Flow:

Select Payment Method → Enter Payment Details → Booking Confirmation → Notification
Reminder

5. Feedback and Rating

1. Service Completion:
User completes the service visit.
2. Feedback Prompt:
Application asks for rating and feedback.
3. Submit Review:
User submits feedback.

Flow:

Service Completed → Feedback Screen → Submit Rating → End

Example Flowchart Breakdown

Login/Register Flow

Steps:

- Open Application.
- Click Login or Sign Up.

- Enter mobile number or email.
- OTP Verification.
- Redirect to Dashboard.

Browse and Search Flow

Steps:

- Choose service category.
- Allow location access.
